Profile

Computer Science and Engineering undergraduate (CGPA: 8.77) specializing in full-stack development and AI-driven engineering. Proven ability to orchestrate agentic workflows (e.g., Antigravity) to rapidly architect complex systems, alongside contributing production-ready code to major open-source repositories like Google MediaPipe. A collaborative problem-solver and strong technical communicator, actively applying algorithmic efficiency to build scalable software solutions.

EDUCATION

08/2023 – present
Visakhapatnam, India

Engineering | B.Tech (Computer Science)
GITAM (DEEMED TO BE UNIVERSITY)
Current CGPA : 8.77

04/2021 – 04/2023
Bokaro Steel City, India

Higher Secondary
CHINMAYA VIDYALAYA
Percentage : 85.2%

04/2010 – 04/2021
Bokaro Steel City, India

Matriculation
De Nobili School
Percentage Score : 92.6%

LANGUAGES

– LANGUAGES

Hindi (Fluent)	English (Fluent)	Telugu (Native)
Professional	**Professional**	**Native**

TECHNICAL SKILLS

– PROGRAMMING LANGUAGES

Python	Java	C	HTML
CSS	JavaScript	R	

– FRAMEWORKS & DATABASES

Django	PostgreSQL (pgvector)	Oracle MySQL

– AI & COMPUTER VISION

Machine Learning	OpenCV	MediaPipe	TensorFlow

– TOOLS & SOFTWARE

AutoCAD	Fusion 360	Blender	Unreal Engine 5

PROJECTS

Scoutops

- Engineered a full-stack player report management application, progressively scaling the architecture from a standard CRUD design to a pgvector-backed Knowledge Base.
- Integrated an autonomous AI agent capable of natural language data processing, streamlining database management and report retrieval for end-users.

Gesture Vision

- Developed a hands-free, split-hand operating environment using Python, MediaPipe, OpenCV, and PyQt6, eliminating the need for physical hardware interactions.
- Engineered precise webcam-based gesture recognition (e.g., thumb-index pinches for clicking and volume control, peace signs for screenshots) to facilitate seamless Windows OS navigation.

Google Open-Source Contribution

- Resolved API inconsistency → Developed and submitted pull request to expose Normalized Key point in containers and cosine similarity in components.utils by updating missing exports in init.py files, aligning Python API with official documentation paths
- Completed Google Contributor License Agreement (CLA) process → Code pending final maintainer review and merge

Archestra AI (Open Source Contribution)

- Resolved open architectural issue #3859 → Engineered bidirectional JSON configuration sync and multiline argument parser for Archestra AI frontend
- Maintained conflict-free codebase → Developed and staged merge-ready solution on public fork within repository contribution limits
- Improved configuration accuracy and UI functionality → Enhanced open-source AI platform capabilities
